iphone 6/6s/7 I have installed the newest version of nanchat on my iphone 6+6s+7. But is seems to work only in ios 11 (updated the apps after it was already downloaded from play). On ios 11 it works well. But I am afraid that i need to update the app to be compatible with new update. The problem is that I dont know how to do that. Can anyone help? A: You can't. You can't have an app that only works with the latest OS version. You have to have it to be compatible with older versions. Q: Why my php code is not working I have a script that downloads XML from a remote site (I do not have the rights to make changes to that xml). This code is the only one that does not work. It always downloads one xml file, but one that is more than a year old. How can I fix that? result->row[0]->tag_id; }
?> Update: 90 TEST 2 2014-04-11T11:25:58 1 TEST 2 This code will get me the value of the tag_id tag. Looks like it could have been a f3e1b3768e
