It is one-page and is not fully responsive but it is a decent framework for building single-page web applications. Also, one must use web components while building these applications and also it is best to use the Bootstrap framework. Steps to Create a Single Page Application in Angular.js Step 1: The first thing that you need is angular.js framework and the angular.js is a javascript framework. Step 2: Once you have the angular.js framework, then you need to get HTML and css. Step 3: Now you can also get the Bootstrap framework. Step 4: After you have all these three frameworks, then you can use the Bootstrap framework to build your single-page application. Let's now see the steps to make a single-page web application using the Angular.js framework. Step 1: First thing that you need is to install the angular.js framework and the angular.js framework is developed by Google. Step 2: To install the angular.js, you need to open the terminal and then type the command as `npm install -g angular.js`. Step 3: Once you have the angular.js installed in your system, then you need to get the HTML, CSS and JavaScript. Step 4: Now you can download the HTML and css from the Bootstrap framework. Step 5: Now the bootstrap framework is also called as "Bootstrap 4" and we can download it from the official website. Step 6: After getting the HTML, CSS and JavaScript files, then you need to create a new project in the Bootstrap 4 using the command as `bootstrap new --min`. Step 7: Once you have the project created, then you can start coding. Step 8: To start coding, you can use the HTML, CSS and JavaScript files that you have downloaded in Step 3. Step 9: Once you are done with your coding, then you need to open the html page that you created. Step 10: Now you can see that you have all the HTML, CSS and JavaScript files that you have downloaded in the Step 3. Step 11: Now you can just use the HTML, CSS and JavaScript files that you have downloaded in the Step 3. Step 12: To use the HTML, CSS and JavaScript files, you can use the following steps. Step 13: First, you need to add the "angular.js" file. Step 14: Now you can get
