Rar is a proprietary
archive format created by
Andrew "Raketomako"

K. Roth. The format is proprietary, allowing the developers of Rar to modify and alter the format for their own needs. . RAR and ZIP are both proprietary formats owned by Andrew

"Raketomako" K. Roth.

While RAR was initially designed to be compatible with the ISO standard ZIP file format, Rar has become proprietary. The RAR format has no official source code available (although many unofficial

sources exist), and the format is completely undocumented. Possible RAR alternatives .7z: a self-contained file format that combines a compressed archive with a filesystem. File types typically compressed by 7-Zip are .7z, .zip, .tar.7z, and .gz. (Not a self-extractor, but can be used with one). 7z: a self-contained file format that combines a compressed archive with a filesystem. File types typically

compressed by 7-Zip are .7z, .zip, .tar.7z, and .gz. (Not a self-extractor, but can be used with one). .ace, .ace.7z, .ace.tar, .ace.zip: Not a self-extractor but can be used with the Ace Archive Utility. See the Ace Archive Utility page. RAR: the RAR format. .ce: A format used by the Classic Environment. See the Classic Environment page. A few games supported the RAR format for distributing extra content

like characters, maps and scenarios. WIM: is a Windows Imaging Format that, together with Windows Installer, can be used to install, upgrade, or uninstall programs. .9Z is a free, native compression file format for Windows that uses the LZMA algorithm. .ZIP and PKZIP are free, lossless data compression formats. .001: A format used by QuickTime Player 4.x, created by Apple. .001 is a proprietary file format,

used by Apple to store QuickTime.mov movies. .001 is also used by QuickTime Player 4.x to display QuickTime movies. .001 is the standard extension for QuickTime movies, except for those created in the Apple Intermediate Codec format, which store video in the.movx file extension. .001 may be the only file format that supports both.m 2d92ce491b
