; ISBN13: 9780194731528; Available from: The importance of good, informed child health care is of great importance for children's long-term health, their ability to cope with illness and infection, their ability to develop, and their ability to cope with life and learning. Child Health in the 21st century is one of the priorities in policy and practice. The importance of health services for children was stressed in the recent document, The NHS Plan 2000. The 2001 review of evidence on child health in England showed that infant and child mortality and morbidity levels remain considerably higher than in many other countries, and that despite this the child health outcomes for children in England are generally very good. The plan also said that the number of children receiving sick child certificates in England has increased in recent years, particularly for children with asthma. A new set of guidelines on the management of children with asthma in primary care were also issued. Good care and support of children and young people, both under the age of 5 and at the age of 18, can contribute greatly to their full participation in society. They have a responsibility to invest in the health and well-being of the child and young person and in the NHS to make sure they receive this in a fair and equitable way. Children have a right to be cared for by a doctor and to receive care that is acceptable, appropriate, timely, safe and effective. It is also important that they receive care that is enjoyable, involving them in their care and has a positive impact on them. It is the responsibility of everyone involved in their care to work together and to take a positive attitude towards providing good care to children. This comprehensive new book provides the reader with the latest information on child health issues and gives guidance on the most important aspects of child health. The book covers health issues from conception to adulthood and provides an insight into the latest trends in child health and the most up-to-date information on paediatrics.
