BS 6093: Design of joints and jointing in building construction. A-10-1. S Series. BS 4-1: 1993. Structural steel sections. Part 1: Guide to sampling and testing aggregates. Category:Building engineering Category:Structural engineering Category:Structural systemQ: Have a date/time parameter in an Alert Query in SQL Server 2008 I need to know when there has been changes to a record. I can see that a date/time variable could be stored in a column of a table, but I also need to know what time the change took place. This table contains records which are updated regularly. I could have a separate column in each record that records the last updated date and time, but I don't think that is optimal. My other alternative would be to have a datetime column as part of the table, but I'd have to UPDATE each record in the table, which isn't ideal either. Would it be better to have a DATETIME column in the table and a parameter in the query? Thanks for your help! A: You can use the CURRENT_TIMESTAMP value as a default and make sure that whenever a record is inserted, the column gets updated to the current time. This approach has the advantage that you do not need to manually update the value. If you have multiple client applications which access the table, they will automatically get updated to the current time, but only if they insert or update a record in the table. The application which displays the table values will have the current time displayed. The Pakistan cricket team is in England on a high after their 1-0 series win over the hosts. The victory was the first time that Pakistan had won an ODI series in England since 2010. With series victories over England and Australia in 2015 and 2017, respectively, the Pakistan team is the only country to have won consecutive ODI series in the UK. Talking about his thoughts on the triumph, Azhar Ali took to social media to express his happiness. "What a win! Thanks @bakhtarlal for this wonderful feat. Glad to be a Pakistani cricketer in the U.K. England this time round. Coming home with the trophy is icing on the cake," he wrote. What a win! Thanks @bakhtarlal for this wonderful feat. Glad to be a
