I want to use this line but it's not working. sed "s/tú/El Mundo De Pica Pau./g" A: You are trying to match a string to the pattern /tú/, but the string to be matched must be enclosed in quotes to prevent the shell from interpreting /tú/ as a shell glob. sed "s/tú/El Mundo De Pica Pau./g" should be sed "s/tú/'El Mundo De Pica Pau'./g" All posts for the month August, 2010 As many of you know, over the last few years I've been conducting research on the application of a new tool called Operational Transformational Leadership (OTL). A lot of research has already been done on the efficacy of OTL, and I've had the privilege of conducting multiple client projects with some of the leading thinkers in the field. I even put together a mini-website with OTL research, videos and more. I'm grateful that I've gotten the opportunity to be a part of OTL's growth and I'm looking forward to what the future holds for the movement. While OTL is gaining momentum, a large group of leaders in the world of coaching are just starting to understand the concept. As I've been studying and implementing OTL, I've noticed that a large group of coaches are not utilizing it as a part of their coaching toolbox. Many are using it, but most aren't using it the way it's meant to be utilized. This all stems from two reasons; 1. OTL is complex and 2. I don't think that many of the coaches out there are very familiar with the concept. The good news is that OTL is simple. The bad news is that it's not simple and some people don't understand the concept of complexity in general. If you're interested in learning more about OTL, I recommend that you go to the following link: I'm really excited to introduce the project to you. As many of you know, I've been spending the last several months working with a company called Zerolis, which is based in Oslo, Norway 2d92ce491b
