AutoCAD is the world's leading CAD software. Media playback is unsupported on your device Media caption Prof Ahmed Al-Dubai: "The role of the urologist is to address the symptoms rather than make an absolute histological diagnosis" The danger that men with prostate cancer are not being given treatment that is appropriate for their individual needs is too great, experts have warned. Patients with intermediate-risk disease do not need to be monitored over a 10-year period, they say. The largest study on men with the disease to date has found treatment rates are still "unacceptably low" in the UK. The National Institute for Health and Care Excellence (NICE) has responded by publishing a new guidance. 'Unacceptable' At the University Hospital of Wales in Cardiff, which took part in the study, 1,338 men were diagnosed with intermediate-risk prostate cancer over a six-year period. Analysis: Charlie Frame,
