The effect of local hyperthermia on the penetration of 10-cm-long, 0.8-mm-diameter, 6-0 polypropylene catheters was studied on the hamstrings of five adult rabbits. Half of the animals were submitted to a local heating of the thigh region using an infrared-radiant heater, and the other half were left untreated. The temperature in the thigh was continuously monitored using a thermocouple. In animals with an untreated thigh, the average rate of catheter penetration was  $3.1 \pm 0.3$  mm/h. This rate increased to  $4.6 \pm 0.4$  mm/h (P less than 0.05) in the heated animals. We believe that this increase is due to the skin damage that occurs during the heating procedure. It is concluded that local hyperthermia can increase the rate of catheter penetration through the hamstring muscles.Q: Why is my division result 0? I have a question regarding Division in JS.  $\text{Math.round}(25.3/6.9)$  results in 0 but the division should return 1. I have tried to Google a solution, but it always works in the following way:  $\text{Math.floor}(25.3/6.9)$  Why is that? A: The division is done from the top of the numbers. Therefore 25.3 comes first and 6.9 comes second. Then the division is done to give you a result of 25.30 which is rounded to 25. Chardon Reservoir The Chardon Reservoir is a reservoir in Sebring Township, Geauga County, Ohio, near Chardon. Built in 1969 for local municipal and industrial use, the reservoir has been owned by Geauga County since 1974. History The Chardon Reservoir was built as part of the Chardon Dam Project in 1969, to increase local water storage for municipal and industrial use. Construction began in 1965 and was completed in 1970. The project was funded entirely by Geauga County, and Geauga County first owned the reservoir. The dam, constructed in of reinforced concrete, is high. The reservoir, which provides of water annually, covers 2d92ce491b
