search for word in a string In python 3.x, I want to find out if the word "MATCHING" is present in the string "TEST". The

only two possibilities are: the word "MATCHING" is present in the string "TEST" the word "NOT MATCHING" is present

in the string "TEST" I tried this regular expression: #this regex checks for the presence of the word "MATCHING" in the

string TEST MATCHING = r"MATCHING"

NOT_MATCHING = r"NOT_MATCHING" if

re.search(r"MATCHING", TEST): #the word

"MATCHING" is present in the string TEST elif

re.search(r"NOT_MATCHING", TEST): #the word

"NOT_MATCHING" is present in the string TEST I feel that

this is a fairly naive way to implement this and hence any suggestions on how this can be improved. A: Search should

do the work: >>> re.search("MATCHING", "TEST") >>>

re.search("NOT_MATCHING", "TEST") >>> Another

approach, which doesn't depend on the regular expression

syntax being supported by your platform's regular expression

library: >>> import re >>> TEST = "TEST" >>> match =

re.search("MATCHING", TEST) >>> if match: ...

print("MATCHING") ... elif

re.search("NOT_MATCHING", TEST): ...

print("NOT_MATCHING") ... else: ... print("NOT

MATCHING") ... 2d92ce491b
