[Download] Fly Eastern Rwanda Airport ...Native atrioventricular nodal and left bundle branch block in a patient with Graves' disease. A patient with Graves' disease is reported who developed right bundle branch block associated with left ventricular hypertrophy and congestive heart failure, without other significant ECG abnormalities. At autopsy, the cardiac conduction system was found to be grossly normal, but in the right atrium and right ventricle histological lesions compatible with thyrotoxicosis and goiter were found. No evidence of atrial fibrillation was found in the heart. The combination of right bundle branch block and left ventricular hypertrophy in a patient with Graves' disease is uncommon. In our patient it may be related to the presence of myocardial thyroid disease.If you were thinking about hitting
