Launch a program of your choice in the system's global menu using a keyboard macro. Clicking the macro for a program you want to use will open that program in the system's global menu and assign the macro to it. Keyboard macros do not work on the command line. Parameters: --list-mode (0 or 1) shows or hides a list of current keyboard macro assignments in the interface. Macros will still work if the current keyboard layout is customized, but the "macros" button will no longer work. --keycodes (on or off) displays keycodes associated with your keyboard in the interface, as a rough mapping of the keys. --assign-keycodes (on or off) allows you to assign keyboard keys to macro commands. --assign-start (on or off) allows you to assign macro commands to buttons in the interface. If you assign a macro to the button the text "start" will appear on the button. --assign-end (on or off) allows you to assign macro commands to buttons in the interface. If you assign a macro to the button the text "end" will appear on the button. Example Usage: Example output: Press any key to quit Macro 'help' will open help, and assign macro 'help' to it. Help will open in the system's global menu and assign macro 'help' to it. Press any key to quit Macro's show-keycodes' will show the current keyboard's keycodes, and assign macros to it. Macro's show-keycodes' will show the current keyboard's keycodes, and assign macros to it. What's New in the Mega Calculator?

Nowadays, smartphones have a huge influence on our life. Usually, they are used for everything, including social media, communication, navigation, and gaming. As such, it's no wonder why we use them for more applications, namely, looking up internet content. If you are looking for a quick way to do it, Windows has the calculator app you need. The Calculator in Windows 10 Functionality Microsoft includes the Calculator in Windows 10, and it's one of the most basic applications you can use. It has a huge advantage of being responsive to changes in the screen size, and it shows up as soon as you open the main app folder. The default Calculator is very simple, but it also has a rich mode that shows the value on the right side of the window. The math mode is used to quickly make calculations, as well as adding, subtracting, or multiplying. Both modes are under the ribbon – the default and rich – and you can switch between them at any time. To be able to do it, the icon of the ribbon must be displayed to the right of the icons in the navigation bar. Opening up the ribbon takes you to the formatting options. Since it's pretty limited, don't expect too much. You can change colors, fonts, and even the shortcut to open the calculator, but the rest is optional. The keyboard in the Calculator is pretty basic. Typing text shows up in the top half of the window, and it's not possible to scroll through the text. You can switch it to the left or right, and see results in both modes. The clipboard in the calculator can be used in order to paste directly the results. It is presented as a row of numbers, and you can easily copy them to be displayed in another window. Calculator has a basic help feature, which explains the basics of arithmetic and formats, and what the keyboard shortcuts are. Note that you can't use the keyboard for units, or special characters. Also, there are some mistakes in the help, as it refers to the keyboard shortcuts as "Math". Appearance The Calculator in Windows 10 isn't overly complicated. If you use it often, you'll notice it's not bulky, and you can easily carry it around in a folder. While the window is pretty simple, it offers several editing tools. You can select the numbers to be displayed, or the type of units. You can also display the number of decimals, and get them to be shown in a pop-up window or on the right side of the page. If you think you have spent enough time on the calculator
