Quick Tile is an Adobe Photoshop plugin that can help you create seamless tiles. The plugin merges the image with its half wrapped self. Quick Tile was created by patrickci.com to make the process of creating seamless tiles easy for everyone. You can also use the plugin to create tiles for zoom levels that don't have the tile edges wrapped, like a 16x16 tile at a zoom of 5x. In the first example, only the left side of the tile is wrapped, so the left edge of the image will have a white stripe. In the second example, the entire tile has been wrapped. Click the Download button to download the plugin and image of the two examples from the left. Adobe Photoshop CS4: For Photoshop CS4 you need to upgrade to the CS4 package. Open this file: HDR_Tiles_CS4-CS4.zip Double click on a folder that starts with "ASCII. " This is a straight ASCII file. Extract the zip file. Select the images of the two examples from the left. Right click and choose "Export as Photo ". Select "Flat File". Select "8 bit/channel" and "Auto Contrast". Select "RGB" as the output color space. Save the file with the name of the example you want (like "Tile 1" and "Tile 2"). PDF Tiles Generator - A Desktop app to generate Tileable PDFs that allows you to wrap the tiles as you wish. It's free and it's easy to use. Tile-Merge-Plugin - This is a Photoshop plugin that makes it easy to merge tileable images in Photoshop. The December 8th edition of the Yummly Appreciation Group features a discussion about the various ways that the Recycling is used as a tool and a way of life for those that are dedicated to living a more sustainable life. There is a lot of information to process with what it takes to start living sustainably. With the go go go world that we live in, it is no wonder that so many people are trying to live sustainably. Beginning to live sustainably is easy, but making it to the point that you can live a totally sustainable lifestyle can be a long, hard road. There are many things involved, but the better you go at living sustainably, the more your life will change for the better. This is not to imply that those that do not live sustainably are lazy, irresponsible, or cruel. In fact, it is quite the contrary. There are two very different types of people, one that is living sustainably, and the other is living a wasteful lifestyle. In all actuality, a sustainable lifestyle will save the earth, save the birds, save the bees, save the trees, save the lakes, save the oceans, save the old, save the young, save the rich, and save the poor. When one decides to really live a sustainable lifestyle, they will change many things about their life, including their diet, their products they use, and their lifestyle. If you live a sustainable lifestyle, you will start out as a vegetarian. When you take that first step towards living sustainably, you will then look for natural foods, and foods that do not harm the planet and the people that live on it. Much of the time, living sustainably is simple. Once you have a nice, clean bathtub, you do not have to look for a special shower curtain. You can save the trees and the animals by making your own deodorant and antiperspirant, or find other ways to live without the many chemical products that are in them. Find the resources that will help you go green. Talk to the experts at the offices that you work at. Go to places that have good organic and sustainable foods. Consume minimal energy. Consume local, and sustainably produced products. Read more about the facts on how to live sustainably.

The program has a very easy to use interface that requires only three simple steps to start generating tiles. The software creates a Microsoft Windows wizard with a single button on top right of the interface that creates tile style presentation compilations based on the data or image. The software also enables the user to easily create 2D and 3D seamless tiles (from raster and vector data). A rectangular or circular freehand drawing can be used to draw a tile-like shape. The shape will be converted into a Cross-sectional drawing (a 2D or a 3D drawing with periodic simulation of the 3rd dimension) that can be immediately visualized as an interactive selection view. TileDock is an open source, multi-platform application that is designed to replace the need for external tile servers in map-based applications. It was written to fill an immediate need for a lightweight tile server that handles all the heavy lifting. TileDock is designed to be both simple and feature rich. Simple because it was designed to address an immediate need with a high level of usability. Features rich because it does many more things than other tile servers. It can perform the full life cycle of a tile server. From initial setup and configuration of the server to serving tiles to end users, TileDock does it all. Supported backends include Portable files, memory, network or file storage. It can be setup either over the network or locally. The tile server can be protected or not secured. The Server uses a simple threading model. Each tile request goes to one thread, and the thread performs the various tasks needed to serve the request. Tile Graphics is a JavaScript library that allows you to draw vectors and images of Tiles on any HTML5 canvas. It supports PNG, JPEG, GIF, and SVG images. The output is a Tile object of which a single drawing can be rendered using cross-browser functions. JMapi is a Java library that helps you communicate with Microsoft
