Field of the Invention The present invention relates to the

field of low current signaling. More particularly, the invention relates to the use of low current signaling to support a wireless local area network (WLAN). 2. Background Information Wireless local area networks (WLAN) provide network connectivity within an area. In some systems, a wireless interface provides communications between a plurality of access points and stations within a WLAN. Access points are, in some instances, also commonly referred to as base stations. Access points typically connect to a wired network (e.g., Ethernet), and the access points serve as intermediaries for communications between stations that are wirelessly connected to the access points. A typical station includes a wireless interface for communicating with an access point and other stations, and a processor for executing

software. The wireless interface can be a part of a wireless transceiver, which provides the interface with

SMTP Diagnostics is a reliable and simple mail program which enables you to troubleshoot problems with outgoing email and assist with configuring outgoing (SMTP) servers. SMTP Diagnostics gives you the flexibility to test different security scenarios including SMTP authentication and incoming server access before sending. SMTP Diagnostics includes an automatic test script that can be scheduled to run on a predetermined basis. The test script simulates an invalid email address and attempts to retrieve the email. It also simulates an email address that is not active and attempts to send a message to it. In addition, the script will test different servers using different methods to send the message. This mail program also

includes a feature to test the headers of an email message. The headers are usually the first part of the email message that you see when you open an email message. This part of the message can include information about the sender, receiver, subject, and more. This mail program includes a utility that allows you to view and print protocol messages exchanged between your computer and the mail server. View and print this information for diagnosis. SMTP Diagnostics includes a feature to test the security of a mail server when sending and receiving messages. You can test the mail server for DOS attack or buffer overflow attack. The mail server will be tested for different security methods including Digest authentication, User ID authentication, and Pass the hash authentication. SMTP Diagnostics allows you

to send test emails using the Windows command line interface. You can test different email addresses and email servers using a batch file. The batch file has the format shown below. This mail program allows you to send test emails with attachments to your email accounts. SMTP Diagnostics can be run from the Windows command line. The mail program also includes a command line interface. SMTP Diagnostics requires no additional drivers. SMTP Diagnostics is simple to use and requires no time to become familiar with. SMTP Diagnostics does not use any configuration files. SMTP Diagnostics is not subject to the registry changes that some other mail programs require to function properly. This mail program can test multiple email accounts at the same time using

multiple sessions. This mail program supports all file attachments. SMTP Diagnostics is protected by the NDA. This mail program is designed to run on a computer that is already running Microsoft Windows XP, Windows Vista, Windows 7, Windows 8, Windows 10, Windows Server 2008, Windows Server 2008 R2, or Windows Server 2012.
